How does the presence of a star player statistically impact team outcomes?

Key metrics : Game_ID, Star_Present, Total_Assists, Total_Made, Total_Missed, Total_Unknown.

Star players

When there are no star players there are more outliers, this suggests that other players perform better without star players.

No star players

With star players present the median increase a little bit, that could be due to the star player performance on the court.

T-Test

Based on the features provided there is not a big difference in performance in the presence or absence of a star player.

T-Statistic: .67 P-Value: .096
